

Poster Presentation: The Soundson Model for Teacher Training

Dr. Andrea Cohen

Dr. Wiska Radkiewicz

In association with the IOCT (Institute of Creative technologies), De Monfort University, Leicester, UK and the Columbia University, New York, USA.

Our poster presents music educators with an innovative arts-in-education music program SoundSon, which the authors have initiated twelve years ago and implemented since then in various international contexts. The program was created in response to a growing need in today's interconnected World to develop new models in music education, which would allow students to utilize the existing technology for communicating through sounds and for creating music collaboratively across the borders. Based on these premises, the SoundSon program uses widely available technology to implement new musical composition concepts while introducing the notion of learning through international exchange. It provides the teachers with a specific model of an educational sound-based activity, which integrates, in a unique way, multi-cultural elements with musical, environmental and technological education.
